INTEGRATED SECURITY SYSTEMS

SYSTEM INSTALLATION

For each installation, DelcoSecurity designs a Project Implementation Plan to meet and exceed the customer's requirements. Even before contract award, DelcoSecurity invests time and resources in the development of this plan. Requirements are fully analyzed. Staff resources are selected to meet the requirements of the project. The Project Manager plays a key role in this. There is an experienced Project Manager in each DelcoSecurity branch office to manage and coordinate any system implementation. Progressive tools and methodologies are employed to develop a project plan, schedule & budget. DelcoSecurity's scheduling and cost-control programs employ current MIS and accounting methods to provide up-to-date and actionable project cost data. The

DelcoSecurity Quality Assurance Program is reviewed to ensure that the Project Plan conforms to policies and procedures designed for Total Customer Satisfaction. And finally, DelcoSecurity has a model and the infrastructure to handle any contingencies that may arise.

OUR PROJECT MANAGEMENT & INSTALLATION SERVICES TEAMS PROVIDE:

- Project Management
- Installation Services
- Commissioning
- As-Built Documentation

Passionately focused on your success

Project Management

An experienced Project Manager will assume total responsibility for successful project implementation. The DelcoSecurity Project Manager will select the best project team for the requirements and plan the resources necessary for achieving the project goals. Using our field-proven project methodology, the CPM approach will be applied, through such activities as:

- project meetings
- documentation of all project activities and changes
- communication of all milestones met, and
- responsive management of all DelcoSecurity
- personnel, project partners and contractors and other on-site stakeholders.

Installation Services

The DelcoSecurity installation team has been factory-trained to install, troubleshoot & commission all DelcoSecurity hardware and software, as well as third-party equipment such as: CCTV cameras & switchers, intercom systems, elevator control systems, door control panels, programmable logic controllers, revolving doors, turnstiles and other security and safety-related subsystems. Installation technicians are managed by local site supervisors, who liaise directly with the client to provide regular progress reports and contingency plans when installation changes must be contemplated.

Commissioning

Once the installation has been completed, DelcoSecurity performs formalized acceptance testing and commissioning procedures. Because we rely on checklists and acceptance test plans developed through 15 years of experience on five continents, the customer is assured of a quality installation, which meets the requirements as set out in the specification. Not only that, each device and software application is tested for operation, reporting, control and management.

As-Built Documentation.

As any quality program dictates, a system is not complete until it is documented. The DelcoSecurity As-Built Documentation Program ensures that As-Builts (or System Record Drawings) are completed before the system is handed over to the service teams for support. As-Built documentation includes:

- system block diagrams
- wiring diagrams
- equipment lists
- floorplans
- device schedules, and
- system training & maintenance manuals, at a minimum.
